

Tenable for Swimlane

Improve Incident Response with Security Orchestration, Automation and Response

Business Challenge

Organizations struggle with maximizing their proactive defensive vulnerability data during an incident which puts them at greater risk and increases incident response redundancy. Without integrating Tenable's vulnerability data into the Swimlane's security orchestration, automation and response platform, organizations are left without clear visibility into their threat landscape. By utilizing Swimlane's automated workflows and Tenable's vulnerability data you can maximize resources for accelerated incident response.

Solution

The Swimlane integration with Tenable combines Tenable's Cyber Exposure insights with Swimlane's SOAR platform for complete visibility into an organization's security infrastructure and attack surface. Security and IT teams are provided with management insights, configured workflows and real time dashboards to automate time-intensive, manual processes for streamlined incident response.

Value

The Swimlane integration for Tenable provides the ability to:

- Provide pre-defined parameters for running Vulnerability Management scans without requiring knowledge about Vulnerability Management configuration & internal network infrastructure
- Define approval processes for running one-off infrastructure vulnerability scans
- Allow for the creation of automated workflows across security tools
- Centralize your vulnerability insights by viewing a single dashboard

Technology Components

- Tenable.io/Tenable.sc Version 5.11 or higher
- Swimlane Platform

Key Benefits

- **Improve incident response time**
- **Improve processes** with configured workflows
- **Automate** your teams' manual tasks
- **Connect** Tenable to disparate security tools
- **Add context to an incident** with Tenable vulnerability data
